IPMnet NEWS

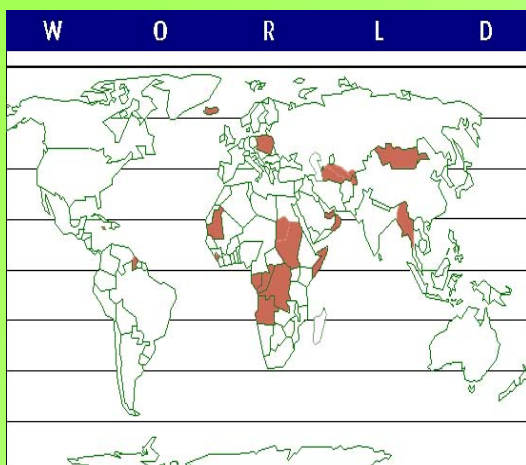

Each monthly issue of IPMnet NEWS aims to provide a user-oriented mix of current IPM news, publication and CD reviews and alerts, notes about useful websites, equipment information, available position notices, selected journal articles, and other material of wide, or in some cases narrow, interest.

NEWS issues always include the latest additions to the IPMnet CALENDAR, the single most comprehensive listing of symposia, meetings, training courses, workshops, and other events relating to IPM.

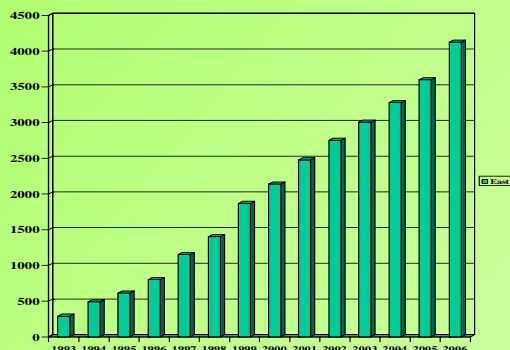

The NEWS strives to provide useful material as free of editorial bias as possible, along with contact names, addresses, e-addresses, and website URL's so recipients can easily obtain further information for specific items of interest.

IPMnet NEWS has grown from 300 subscribers initially to over 4,000 e-mail recipients in a documented 142 countries today. Total monthly readership is estimated to range up to 5,000 individuals through a combination of direct e-mail, supplemented by the web, numerous small informal sub-networks, and pass-along copies.

There are many other newsletters that are either focused on IPM or periodically carry material related to IPM, but none that offers the same slice of IPM information that IPMnet NEWS delivers every six weeks

Pattern of increase in subscriptions to IPMnet News

IPMnet NEWS - Future Direction

In 2003 IPMnet NEWS forged a linkage with the four U.S. Department of Agriculture-sponsored Regional Pest Management Centers. Now, each issue of IPMnet NEWS includes a special section with articles related to the Centers.

We are also now connected to the USDA IPM CRSP, and will increasingly be reporting on the projects associated with this program.

Plans for IPMnet NEWS call for continuing to serve the global IPM community with timely information, as well as include material of relevance to the regional centers. Both e-mail and web versions will be supported.

IPMnet NEWS - Subscriptions are Free

To subscribe

Send the message "subscribe" to:
IPMnet@science.oregonstate.edu

and specify the e-mail address you wish IPMnet to use.

Financial support is provided by the USDA CSREES, the OSU IPPC and the USDA IPM CRSP
